PROFESSIONAL SUMMARY

Full-Stack Software Developer with professional experience building scalable web applications using React, TypeScript, Node.js, Express, PostgreSQL, and REST APIs. Experienced in designing secure authentication systems, integrating AI-powered features with OpenAI, Claude, Gemini, Groq, LangChain, and Retrieval-Augmented Generation (RAG), and delivering production-ready applications from architecture to deployment. Passionate about building clean, maintainable software that improves user experience and solves real business problems.

TECHNICAL SKILLS

- **Frontend:** HTML5, CSS3, Tailwind CSS, JavaScript (ES6+), TypeScript, React, Next.js, Vite, Responsive Design, Accessibility (WCAG)
- **Backend:** Node.js, Express.js, Java, REST APIs, JWT and OAuth Authentication, API Design, Role-Based, Access Control (RBAC)
- **Databases:** SQL, PostgreSQL, Supabase, Data Modeling, Query Optimization
- **AI / LLMs:** OpenAI API, Claude, Gemini, Groq, LangChain, LlamaIndex, Retrieval-Augmented Generation (RAG), Prompt Engineering
- **Tools:** Git, GitHub, Postman, VS Code, Figma, CI/CD Basics, Debugging, Performance Optimization

PROFESSIONAL EXPERIENCE

Software Developer | Exatect

September 2025 – Present

- Designed, developed, and maintained production-ready full-stack web applications using **React, TypeScript, Node.js, Express, PostgreSQL, and REST APIs** in a fast-paced startup environment.
- Built secure authentication and authorization systems using **JWT** and **Role-Based Access Control (RBAC)**, ensuring protected access across multiple user roles.
- Developed reusable React components and responsive user interfaces, improving development efficiency and maintaining consistent user experience across desktop and mobile devices.
- Optimized backend APIs and SQL queries to improve application performance, reducing response times by 15%.
- Diagnosed and resolved application bugs, performance bottlenecks, and security issues, contributing to a more stable and reliable production environment.
- Collaborated with engineers through code reviews, feature planning, and architectural discussions to improve code quality, scalability, and maintainability.
- Delivered 5+ production features and enhancements while participating in an agile startup development process.

Full-Stack Software Developer | Freelance

2023 – Present

- Designed, developed, and deployed **multiple** full-stack web applications using React, TypeScript, Node.js, Express, PostgreSQL, and Supabase.

- Owned the complete software development lifecycle, including requirements of gathering, architecture, implementation, testing, deployment, and ongoing maintenance.
- Built secure authentication systems using JWT, protected routes, and persistent user management.
- Integrated external APIs including **OpenAI** and **GitHub**, enabling AI-powered features and real-time data synchronization.
- Implemented responsive, accessible, and mobile-first user interfaces following modern UI/UX best practices.
- Built scalable REST APIs supporting frontend applications with efficient database interactions.
- Used Git and GitHub for version control, feature branching, pull requests, and collaborative development.
- Successfully delivered 20+ production-quality applications from concept to deployment.

PROJECTS

AI Supervisor Assistant

React, TypeScript, Node.js, OpenAI API, LangChain, RAG, Supabase

- Built a full-stack SaaS application using React, Node.js, and Supabase where managers upload a PDF spec and an AI pipeline (LangChain + Groq llama-3.3-70b) automatically generates project tasks, staffing roles, and assigns team members, reducing project setup time from hours to seconds.
- Designed a role-based candidate matching algorithm that scores team members by skill overlap against a 15-skill role map, ranks candidates by match percentage, and automates hiring emails via Resend, replacing manual HR screening with a data-driven workflow.
- Engineered a full chat system supporting AI assistant conversations, direct messages, and group channels, with 3-second polling for real-time delivery, and message persistence in PostgreSQL. The AI chat assistant understands natural language progress updates ("I finished the login page") and automatically updates task status, What, and How fields in the database, using structured prompt engineering to extract task mutations while keeping internal IDs hidden from the user.
- Built a dual-channel email system using Resend and node-cron: instant alerts for task/project/calendar changes (respecting per-user opt-in settings) and scheduled weekly project summary reports delivered every Monday at 6AM in each user's local timezone - supporting 13 timezone offsets.

AI PDF Knowledge Assistant

React, Node.js, OpenAI API, LangChain, RAG

- Built an AI-powered application that allows users to upload PDFs and query document content using natural language.
- Implemented semantic search using embeddings and RAG pipelines.
- Developed a real-time chat interface for document interaction.
- Designed backend document parsing and retrieval systems for efficient search.

GitHub Repository Explorer

TypeScript, Node.js, APIs, Supabase

- Built a full-stack application for searching and saving GitHub repositories.
- Implemented authentication, protected routes, and persistent storage using Supabase.
- Integrated GitHub API to fetch and display real-time repository data.
- Developed scalable state management and responsive UI components.

EDUCATION & CERTIFICATIONS

- Bachelor of Science in Civil Engineering
University of Construction of Bucharest, Romania
- Oracle Certified Associate, Java SE 8 Programmer – Oracle
- The Complete JavaScript Course: From Zero to Expert! - Udemy

ADDITIONAL QUALIFICATIONS

- Strong analytical and problem-solving skills developed through engineering and software development.
- Experience working independently and delivering complete end-to-end applications.
- Continuous learner focused on modern web technologies, AI systems, and scalable application architecture.
